Re: Draft Transmission Loss Adjustment Factors for 2009 – Consultation Paper  
SEM-08-121

ESB Power Generation (ESB PG) welcomes the opportunity to respond to the above consultation paper issued by the RA's on September 15<sup>th</sup> 2008 and comment as follows:-

1. ESB PG would welcome some clarity around the 3% reduction in the load factor of wind generators.
2. ESB PG would also welcome further information on how the RA's arrived at their decision on zero flow over the Moyle Interconnector and if it is the opinion of the RA's that this is likely to continue beyond 2009.
