

Information Note on Response to SEM-20-089 Updated Roadmap to Clean Energy Package Implementation

SEM-21-009

4 February 2021

Background

In December 2020 the RAs published an Information Paper titled 'Updated Roadmap to Clean Energy Package Implementation (SEM-20-089¹)' which provided an update to the RAs' plan for implementing requirements under the Electricity Regulation (EU) 2019/943² (the 'Regulation') under the Clean Energy Package.

That paper was published primarily for transparency and information purposes to inform industry on the progress achieved on the deliverables, however it was left open for feedback and comments from interested market participants.

The RAs received feedback on SEM-20-089 in late December 2020 from a market participant who requested the RAs to consider the compliance and implementation of other Articles beyond what was outlined in the Information Paper. Specifically, they requested the RAs to reconsider the compliance with Articles 3, 6, and 10 of the Regulation, which outline principles for the operation of the electricity market and requirements for price formation.

It was requested that the RAs consult on the principles and requirements contained in these Articles *after* the Consultations and Decisions are published on the ongoing work related to Articles 12 and 13 of the Regulation on Priority Dispatch and Redispatch. This would allow there to be a clear definition in place on what constitutes a redispatch action, which would then allow easier assessment by market participants on the impact of pricing signals that proposed changes to price setting would have on the market.

Response

Having considered this feedback, the RAs will publish a Consultation on Articles 3, 6 and 10 which relate to principles for the operation of the electricity market and price formation. This consultation will take place following the publication of the Decisions on Dispatch and Redispatch, and additionally, following the Consultation on compliance with the Electricity Balancing Guideline³ (EBGL).

Furthermore, due to the interaction with Mod_10_19 which relates to dispatchable priority dispatch, the RAs have decided not to implement this modification until all the Consultations mentioned in this Information Note have been completed.
